

Tuesday, 10/3/2017

In a group of 2-4 students, develop low-fidelity (hand-sketch) UI (screen) designs for the following use cases of the *iProc* System.

For screen size, use the provided **landscape** orientation of an 8.5 x 11 stock paper.

1A. Create a New Vendor

1B. Create a New Item

Make sure to include all group member names and z-ids on the cover sheet of your group work. Staple all pages together with the cover sheet and submit your work at the table (in front of the class) before leaving the class.
